# Old Age Home Management System

Presented by Edwin Shibu, Shelton Dany and  
Nikhil Pai.

---

# Acknowledgement

We would like to thank our faculty, Dr. Abdul Nazeer and Mr. Gopakumar G, who motivated us throughout the course of this project. They supported and gave us valuable insight which was vital for the successful completion of our project.

---

# Abstract

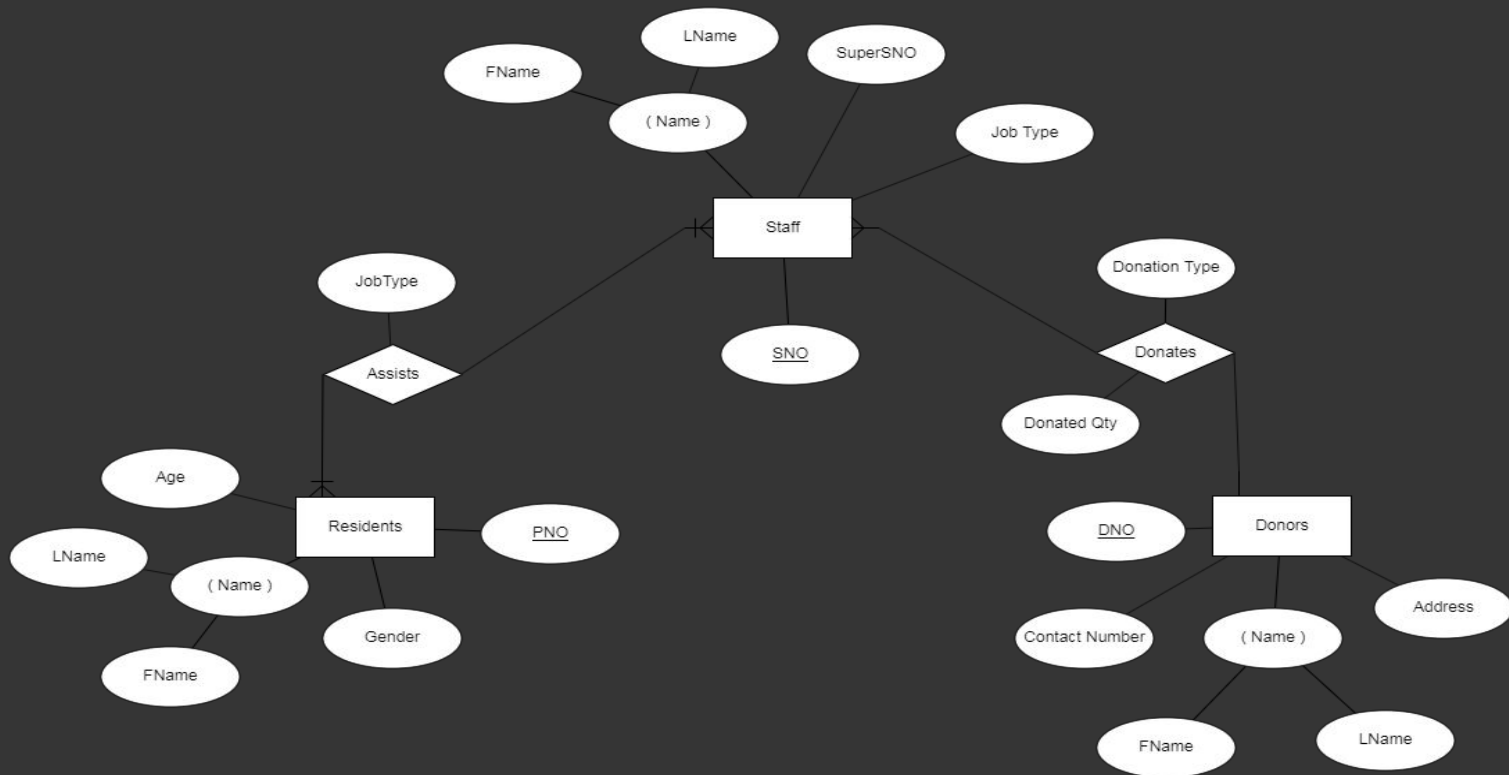

Using HTML, CSS, JavaScript and PHP, we have designed a website to carry out the management process using a Database for a Charitable Home.

The Charitable Home that we are going to base our project on is an Old Age Home.

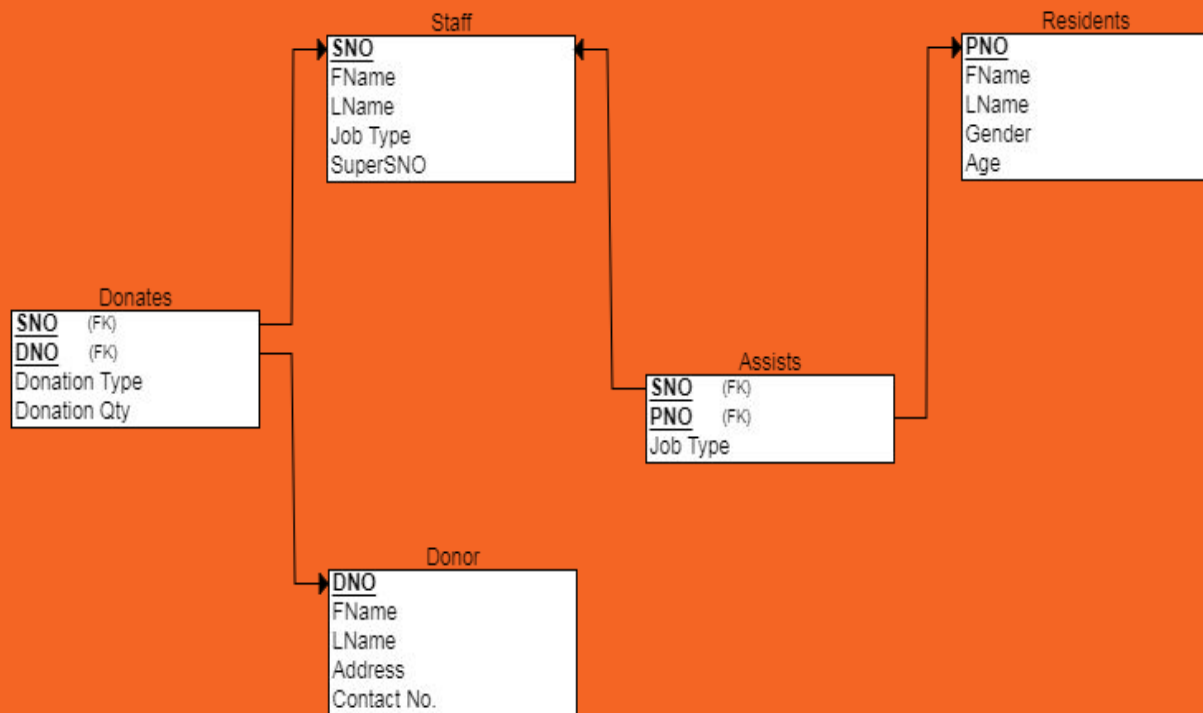

The website will have a backend that consists of a database of the employees, donors and the old age home residents.

The Website handles a wide range of tasks using DBMS queries in order to simplify and automate many processes that would otherwise be very time consuming.

# ER MODEL

# RELATIONSHIP SCHEMA

---

# Important Functions Used

## Management of Residents

1. ResReg()
2. DeleteRes()

## Management of Staff

1. StaffReg()
2. GetDetails()
3. GetEnrolledDetails()
4. GetStock()

## Management of Donors

1. EnrollResidents()
2. ReqDonor()
3. RegDonor()

**Thank**

**You!**
